

# ARCHDESIGN HUB

Build 0019 – 10<sup>TH</sup> May, 2015

Feature	Status	Comment
Property Information prices and location	DONE	At the moment, the property details are captured directly by the admin from the backend. This will include registering the agents as well. It required to make testing easier but once the app goes into production, agents will do the registration themselves as well as upload/update property information
GPS Directions that give your customers turn-by-turn GPS directions to the location from anywhere in the world	DONE	
GPS Coupon feature creates mobile coupons for clients to unlock by “checking in” at your business	PENDING	Will require extra info as to exactly how to value the coupons, and any relevant details
One Touch Calling from inside your app. No numbers to save or remember	DONE	
Event Listings feature allows you to include all of your businesses events on the go	PENDING	
Contact Information allows you to give clients multiple ways to contact your business	PENDING	
Email Photo feature allows clients to take or send a photo and email it directly to your business	CHANGED	Will instead have users send photos directly from within the app instead of via email
Native Image Gallery allows you to display images of your business in a beautiful image gallery optimized for Android	DONE	Will go through more iterations to determine the most appealing design
Set up a fan wall for your clients to leave feedback on your business.	PENDING	
Manage the comments online	PENDING	
Push notifications send messages to your clients whenever you’d like using our easy to use CMS	DONE	The framework is in place.
Implementations of a backend database, capturing contact information of every agent advertising property through the application.	DONE	Collects both agents’ and users’ info
Mailing List feature allows you to stay in contact with your customers by gathering names and e-mail directly inside your app	DONE	Emails and other contact details are store in the backend. An import mechanism will be put in place so that the lists can be acquired as csv files of any other supported format.

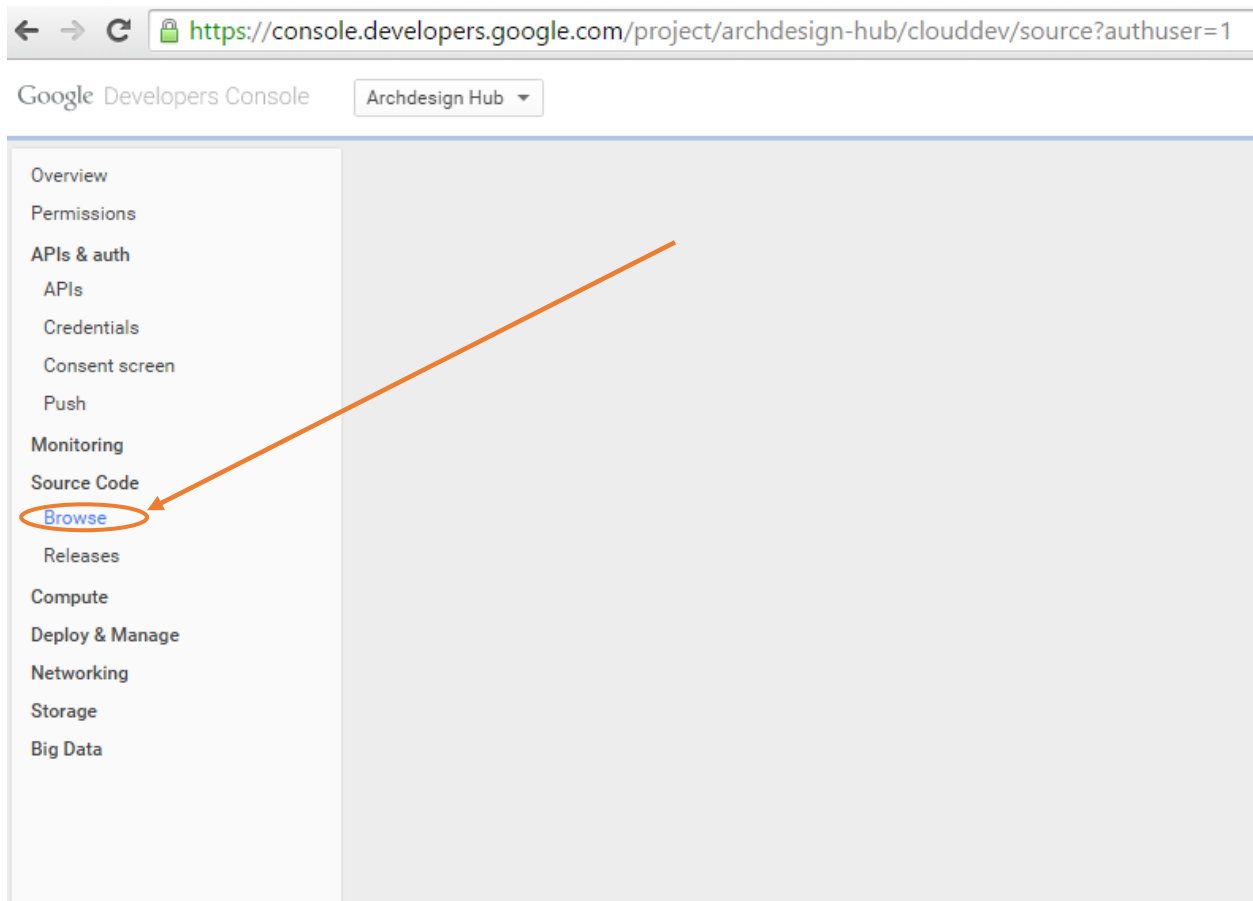

N/B

Some necessary features including analytics, install tracking etc have not been mentioned here but will be part of the app.

All of the core components of both the app and the admin-only backend have been put in place. From this point onwards feedback from the client will with regards to the UI, some functional aspects of the app including any that do not meet requirements, any preferred changes etc will be appreciated.

The backend can be accessed from this url: <http://archdesign-hub.appspot.com/dashboard.html>

The code and any new builds of the APK can be downloaded from the Google Cloud hosted repository:  
<https://console.developers.google.com/project/archdesign-hub/clouddev/source?authuser=1>

Regards,

FNO
